

# POTIND \_\_\_\_\_ (7kV/15kV/30kV)

# Product Data Sheet

**LTL UTILITY SUPPLY**

DIV OF LINEMAN'S TESTING LABORATORIES OF CANADA

## LINEMAN'S POTENTIAL INDICATORS

POTIND(7kV/15kV/30kV)

### Application

Used for identifying energized conductors

Available in 7kV, 15kV & 30kV. Please specify voltage when ordering.

ITEM	DETAILS
Features	Manufactured by Lineman's Testing Laboratories of Canada
	3 voltage ratings to choose from: 7kV, 15kV, 30kV
	Indicates line to ground voltage AC or DC
	Rugged polycarbonate tubing construction
	High dielectric value
	Protective carry case
	Lightweight
Application	Used for identifying energized conductors
General Information	<p>The indicator will flash or glow (due to a special patented circuit) when the working end comes in contact with an energized conductor, indicating the status of the conductor to the lineman.</p> <p>The live line indicators are available in a rating of 15kV and 30kV line-to-ground voltage, AC or DC. The 15kV and 30kV will flash on 120 Volts. When the indicator is tested to its rated voltage and found to be in good working order, the leakage coming off the handle is less than 1 milliamp. However, the actual current when held in the hand, or rubber gloves is much lower. CARRYING CASE &amp; INSTRUCTIONS INCLUDED.</p> <p><i>NOTE: Lineman's Testing Laboratories recommends the use of all appropriate personal protective equipment at all times. Approved work and safety practices established by safety officials of the utility or work place should be followed at all times.</i></p>
